

engineered nano biology

XNA. Genetic molecules contain hereditary information which can be passed down for generation

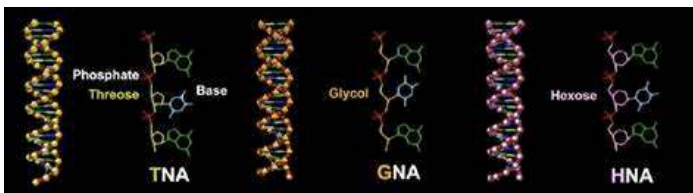

you have to shut off the program--they right now are hitting asians the way it works you insert an implant or a bot or a dendrimer and it is coated with XNA

Sugar modified XNAs

They arise from chemical SB where the very basics of life biochemistry are changed in order to create biological systems that are truly different both in metabolism and on the genetic information level. Examples include altered or non-naturally occurring bases within the DNA and comprise the idea of entirely different genetic information storage molecules, so-called xeno-nucleic acids that cannot interact with naturally occurring DNA (Fig. 2) (Benner and Sismour, 2005; Herdewijn and Marliere, 2009; Marliere, 2009; Yang et al. , 2006, 2007). Another example is the use of nonnatural building blocks such as noncanonical amino acids. More visionary ideas even toy with the idea to replace carbon with silicon in essential biomolecule

and this allows this program to transfer over to your dna since XNA can replicate or copy your dna ---doe not cause an a immune response gets into your code turns off the dna

signals to your immune system---they are saying by summer 60% of the population will have become infected---what they are saying is that they will have infiltrated 60% of the GP planet wide through either a vaccination program drugs or food supply or aerosol the skies---aerosoling people with the program---a form of vaccination---then all that is required by any govt is to activate the program and you can then begin wiping out populations---India I think is next that are already on 7 g --- this is even more lethal then THZ that 6 g is ---7g there is no antennae----your the antennae
